LinkedIn | GitHub | LeetCode: 250+ solved

Summary

Software Engineer with 1+ year at EnactOn Technologies (including internship), building TypeScript backends and products with NestJS, Next.js and PostgreSQL. Focused on multi-tenant SaaS backends, agentic AI and workflow automation, and leads delivery end to end on client platforms from system design to launch.

Experience

Software Engineer Feb 2026 – Present
EnactOn Technologies *Surat, India*

- **ContentPilot** (Forward Deployed) – Owned an AI SEO content platform end to end, from scratch to launch, scaling output from 10 to up to 60 articles/week; reported conversion rate rose from 1% to 4.5%.
- Designed brand onboarding (audience, guidelines, SEO, visual preferences), SERP and competitor-driven outlines, and staged generation with human approval points and quality checks.
- Built a scheduled job turning recurring user corrections into persistent brand preferences; automated ClickUp task creation and updates from content pipeline status; integrated Claude MCP agentic pipelines.
- **MARA** (team lead) – Led a Swiss real-estate platform with semantic property search, AI-assisted onboarding, custom CMS, sun simulation, location intelligence, and Pipedrive and Casa Gateway CRM integrations.
- **Pontora** – Architected backend services for a multi-tenant Swiss HRMS: RBAC, impersonation, payroll, invoicing, document OCR with LlamaIndex, and Stripe subscription billing in CHF.
- Improved backend performance with lazy initialization, background job scheduling, query and API optimization.
- **Awards:** Rising Star and AI Hero, EnactOn Technologies.

Software Engineer Intern Jun 2025 – Jan 2026
EnactOn Technologies *Surat, India*

- **LMS** (team lead, system design) – Designed and led a production Learning Management System with role-based dashboards for instructors and students, course and assignment flows, and secure REST APIs.

Projects

Agent Gate | *TypeScript, NestJS, Next.js, Supabase/PostgreSQL, MCP, JWT, Docker*

- Built a multi-tenant control plane for AI agents calling REST and MCP tools: JWT identity, scope-based RBAC policy gateway, and a human-in-the-loop approval queue that pauses high-risk actions.
- Added attributable audit traces, provider-fallback replay for evaluation, and Supabase row-level security for tenant isolation; shipped with a Next.js dashboard, Swagger docs, unit and e2e tests, and Docker Compose.

Google Home Automation Assistant | *Python, FastAPI, Docker, Claude MCP*

- Built an agentic assistant linking Google Home with Claude MCP servers for natural-language smart home control, reminders and task automation, with context memory and modular tool execution.

AI Interview Mocker | *Next.js, TypeScript, Firebase, LLMs*

- Built an interview prep platform that generates personalized questions and evaluates answers with LLMs.

Publication

Care Smart AI: Hospital Management System with AI Integration – *IJSRET*, Vol. 11, Issue 4, Jul–Aug 2025, first author.

- Built a scikit-learn symptom-to-disease classifier, evaluating SVM, Random Forest and Naive Bayes with symptom encoding and data balancing, plus an NLP report summarizer (tokenization, stopword removal, key-phrase extraction) served as a microservice.

Technical Skills

Backend: Node.js, NestJS, Express.js, REST APIs, background jobs, Stripe
Languages: TypeScript, JavaScript, Python, Java, SQL **Data:** PostgreSQL, Supabase, MongoDB, Firebase
Frontend: React.js, Next.js, Astro, Tailwind CSS **AI:** Agentic AI, Claude MCP, LlamaIndex, RAG, semantic search, OCR, LLMs
Cloud/DevOps: Docker, Google Cloud Platform, Cloudflare, GitHub Actions, Vercel
Engineering: System design, multi-tenant SaaS, RBAC, auth, API and database design

Education

B.Tech, Computer Science and Engineering, Parul University, 2022 – 2026, CGPA 8.30/10
